rappazzini.dev.ar

Solana Blockchain Developer with solid experience in creating innovative, high-performance smart contract solutions within the Solana ecosystem. Proven expertise in on-chain program development using Anchor and Rust, with a rigorous focus on applying best practices, code optimization, and quality assurance through unit and fuzz testing. Seeking challenging roles, especially in DeFi, RWA and Web3 Gaming, that foster technical and professional growth.

EXPERIENCE

Inside Dark Studio, Remote - *Solana Blockchain Developer*

APRIL 2023 - OCTOBER 2025

Collaborating with the team on diverse client projects and products, I develop Rust Smart Contracts using Anchor for DeFi solutions, RWA, and Web3 gaming on Solana. My role also includes implementing TypeScript testing to ensure project quality and security, creating and managing AWS instances, and implementing client/server-side integrations.

OPIS EcoWallet, Remote - *Full Stack Blockchain Developer*

OCTOBER 2022 - APRIL 2023

Developed the primary web application, integrating it with smart contracts using Hardhat, Next.js, Node.js, and various styling libraries, and managing instances on AWS. Successfully collaborated with the team to achieve the MVP launch.

M&F (Contractor), Remote - *Full Stack Web Developer*

AUGUST 2021 - AUGUST 2022

Designed and launched various web solutions—including static websites, dynamic applications, personal portfolios, and e-commerce platforms—for a range of clients. Utilized a technology stack primarily consisting of Next.js/React.js, Node.js, styling libraries, and SQL via ORM.

LANGUAGES / FRAMEWORKS / TOOLS

Rust, Anchor, TypeScript, Node.js, Next, AWS, Git
